RTTS Announces New Office in Atlanta, GA Software Testing Firm Brings Fortune 500 Client Roster and Job Opportunities

New York, June 6, 2007 - RTTS, the premier professional services organization specializing in providing software quality for critical business applications, announced today the opening of its new office in Atlanta, GA. The new office is located in The Pinnacle building at 3455 Peachtree Road in the city's Buckhead community, considered one of the top business districts.

"We are pleased to announce the opening of our fifth office in the thriving technology community of Atlanta," said Bill Hayduk, CEO of RTTS. "Over the eleven years we've been in business, we have developed and maintained a strong client base and close ties to the IT sector here. This was the right time to deepen our investment in this market so we could best serve our Atlanta customers such as Autotrader.com."

"We need great testers to give our customers the best possible service," said Chris Thompson, Team Lead of RTTS' Atlanta Office. "IT talent is thriving in Atlanta, and we intend to hire and train a significant number of employees over the next year who can bring strong programming, collaborative and communication skills to our Fortune 500 clientele." The Atlanta office is the latest addition to RTTS. In 2006 the firm added 15 new corporate customers in the retail, construction, financial, travel and telecommunications industries to its client roster. Revenues increased by 25%, primarily due to referrals. In June, 2006, the company opened an office in Philadelphia, adding to its presence in New York City (headquarters), Orlando and Phoenix. This was followed in October, 2006, by the opening of a new, state-of-the art training facility in New York City, allowing RTTS to offer additional consulting, educational, and support services to its clients.

RTTS' methodology for end-to-end software testing insures application functionality, reliability, scalability and availability along with proven ROI benefits for its clients. Unlike other companies which simply "black box" test applications from the user interface, RTTS tests its clients' applications with the lesser-used and much more comprehensive "grey box" method, testing applications from the front-end interface through the entire network -- from the firewall to the security server through the web server, application server, XML, eContent/eBusiness and ERP/CRM servers -- all the way to the back-end database.

"RTTS' test automation services and exceptional staff have been a key component of ensuring the reliability, functionality and continued development of our consumer website, as well as other internal and external applications," said Dan Crowe, CIO of Autotrader.com, located in Atlanta, GA. "We are happy to have them not only as colleagues and trusted advisors but now as neighbors."

About RTTS:
