RTTS Presents Compuware Tool Integration at Compuware Partner Summit

New York, June 6, 2007 - Robert Stanley, Team Lead and Senior Test Engineer of RTTS, the premier professional services organization specializing in providing software quality for critical business applications, will present "Implementing Automated Solutions to Complex Brokerage Trading Platforms" on Thursday, June 7th at this year's Compuware Partner Summit in Detroit, MI.

Today the brokerage industry is struggling to leverage the latest technology that make up complex order management systems, all while maintaining data integrity, security and timeliness to market. Brokerage clients face a challenge in managing their global financial systems. Security, reliability and bandwidth on networks, software and infrastructure are increasingly under stress. As these networks and applications become more integrated and sophisticated, the need for quality assurance has never been greater.

Robert Stanley will discuss how RTTS integrated Compuware's software with another vendor's software for a Fortune 100 brokerage firm while executing tests with Compuware's tools. The presentation will include a demonstration of how RTTS performed the integration with Compuware's TestPartner through an open API and launched TestPartner, ran all tests, and then reported all findings back to the vendor's test management system. This keyword framework is now being utilized in the US, Mexico, London, Hong Kong, Singapore and Tokyo by more than 400 employees.

Robert Stanley, Team Lead and Senior Test Engineer, is an expert in the field of brokerage applications and also has expertise in insurance and pharmaceutical applications. Today, he manages multiple teams at the firm discussed in this presentation. He holds a Bachelors degree from the New York City College of Technology as well as a Certificate in Programming.

RTTS' methodology for end-to-end software testing insures application functionality, reliability, scalability and availability along with proven ROI benefits for its clients. Unlike other companies which simply "black box" test applications from the user interface, RTTS tests its clients' applications with the lesser-used and much more comprehensive "grey box" method, testing applications from the front-end interface through the entire network -- from the firewall to the security server through the web server, application server, XML, eContent/eBusiness and ERP/CRM servers -- all the way to the back-end database.

About RTTS:

RTTS is the premier professional services organization that specializes in providing software quality for critical business applications. With offices in New York, Atlanta, Orlando, Philadelphia and Phoenix, RTTS has been serving Fortune 500 and mid-sized companies since 1996. RTTS draws on its expertise utilizing best-of breed products, expert engineers and proven methodology to provide the foremost end-to-end solution that ensures application functionality, reliability, scalability and availability.
