RTTS Announces Appointment of New Director of Marketing, Lauren Medway

New York, October 18, 2007 -- RTTS, a professional services organization specializing in software testing and quality assurance, today announced the appointment of Lauren Medway as the company's new Director of Marketing. Her responsibilities will include setting and executing strategy for all marketing and advertising programs across the company.

Lauren recently served as American University's Assistant Director of Marketing and Communications, after spending several years as Marketing Manager for the University's Kogod School of Business. She has also worked as a marketing specialist for Dimensions International, an information technology and engineering consulting firm. Lauren holds an MBA from American University and a BA from Tulane University.

"We are thrilled to have Lauren join the RTTS team as our new Director of Marketing," said Bill Hayduk, President and CEO of RTTS. "She has demonstrated leadership in business and technology marketing and has the understanding of new marketing technologies that will help drive RTTS' continued success."

RTTS' methodology for end-to-end software testing insures application functionality, reliability, scalability and availability along with proven ROI benefits for its clients. Unlike other companies which simply "black box" test applications from the user interface, RTTS tests its clients' applications with the lesser-used and much more comprehensive "grey box" method. RTTS tests applications from the front-end interface through the entire network -- from the firewall to the security server through the web server, application server, XML, eContent/eBusiness and ERP/CRM servers -- all the way to the back-end database.

About RTTS:

RTTS is the premier professional services organization that specializes in providing software quality for critical business applications. With offices in New York, Atlanta, Orlando, Philadelphia and Phoenix, RTTS has been serving Fortune 500 and mid-sized companies since 1996. RTTS draws on its expertise utilizing best-of breed products, expert engineers and proven methodology to provide the foremost end-to-end solution that ensures application functionality, reliability, scalability and availability.
